

# React + Node (+) Solidity Developer

Working student | Internship | Study project (e.g., TUM IDP) | Freelance  
Munich | Remote

## About Twinu

Twinu is a blockchain-backed data and automation platform for digital twins. By applying semantic web and cryptographic technologies such as NFTs (non-fungible tokens) it acts as a bridge between web2 and web3, providing data processing, interoperability, and automation while reducing complexities and costs. With twinu you can have digital twins of everything you own. Create, collect, transfer, or share twins of all your items, no matter how simple or sophisticated they are!

## Your opportunity

We are experimenting with novel technologies to create standardized, transferable and decentralized digital twins. With your help, we want to bring these experimental systems into a reliable, secure, and scalable system. You will have the opportunity to build and define the structure and creation pipeline of these digital twins, as well as to create a web application to interact and manage the twins.

We offer a deep introduction into the web3 space with the best agile practices and clear use cases using blockchain technologies. You would have the chance to not only support the building of our platform but to shape it.

## Your responsibilities

- Design, development, and integration of new feature requests of twinu's web platform
- Develop, test and upgrade of current and new Solidity Smart Contracts on Ethereum and Polygon chains
- Support and maintain the CI/CD infrastructure (build, test, deploy)

## Your skills

Personal team fit:

- Self-driven spirit, hands-on and getting-things-done mentality with amazing speed in accomplishing
- Ability to adapt quickly to changes in requirements and eagerness to challenge current processes
- Self-reflective character, open to receive and give honest feedback at any time from and to anyone

At Twinu, we focus only on your future potential, not your past. We don't obsess about paper credentials, grades nor titles. We want to understand who you are, how you work and what you want. This is what we look forward to:

### Expected:

- Experience with React and Typescript
- Familiarity with NodeJS

- Fluent in English (at Twinu we currently speak English, German, Spanish, and French)

### Preferred:

- Experience with Smart Contracts development on Solidity
- Experience with GraphQL, Jest and Kubernetes
- Familiarity with Semantic Web, data mesh, data-centricity concepts

## Our offer to you

- High-performance team: Result-focused work where agile teams strive and win together to create lasting impact
- Lean startup: no nonsense rules, no conformity, no hierarchies, no bullshit-bingo, no C-suite-titles
- Work smart, be flexible, stay healthy: newest tools, retreat & events, office garden & fitness
- Top-notch L&D: we believe in learning-by-doing and provide what you need to develop beyond
- Best-in-class compensation: to win and keep best-in-class people, we beat competitive offers

## Curious?
